### PRODUCT DESCRIPTION

The award-winning PIVOT is the most trusted and reliable alpine binding in skiing. The all-new PIVOT 14 DUAL WTR B95 is an elite-level, dual standard freeride binding with an 5-14 indicator range and 95mm brake. Compatible with both WTR "Walk to Ride" rockered soles and Alpine standard boot soles, our DUAL Standard Concept allows quick, easy adjustment between standards with a consistent, natural stance. The reinforced Full Action toepiece combined with the classic Pivot "turntable" heel delivers maximum power transmission, shock absorption and the longest elastic travel on the market to provide more reliable retention and consistent release. The Pivot 14 DUAL WTR B95 is designed for aggressive all-mountain, freeride, and freestyle skiing and can be mounted on skis up to 95mm underfoot.

Rec. Ski Width: 85-95mm

### MAIN TECHNOLOGY

#### DUAL WTR

LOOK introduces the all-new DUAL WTR bindings. The industry's first alpine bindings to offer quick, easy boot type selection for use with traditional Alpine (ISO 5355) or "WTR" Rocker Soles (ISO 9523). LOOK's Dual Standard Concept is the industry's most versatile and performance-oriented platform to address the new emerging standard in boot soles – WTR or "Walk to Ride", and features quick, easy boot type selection while retaining a consistent natural ramp angle between standards. Available on select PIVOT, SPX and NX bindings.

## **OTHER TECHNOLOGIES**

### **ELASTIC TRAVEL**

More elastic travel results in more reliable retention to keep you in when you need. LOOK bindings boast the most lateral travel before release and the fastest re-centering, delivering superior shock absorption and reducing unwanted pre-release.

### **SHORT MOUNTING ZONE**

The shortest mounting zone of any alpine binding available provides less swing weight, improved response, and a deeper, rounder, more consistent ski flex.

### **PIVOT TURNTABLE HEEL**

LOOK's unique turntable design rotates directly under the tibia and provides 28mm of elastic travel to deliver unmatched shock absorption for significant reduction of pre-release.

### **7 POINTS OF CONTACT**

More points-of-contact with the boot results in increased lateral energy transmission, drives more power to the edge of the ski and provides superior control, response, and snow feel.

### **FULL ACTION TOE**

The recently redesigned Full Action toe drives more power into the ski while enhancing steering and control thanks to: -Strategically reinforced housing enhances durability -Increased toe ramp increases leverage and drives energy -14% longer toe-wings provide stronger boot to binding coupling, maximum power transmission -10% wider platform for more efficient power transmission, enhanced steering, and control

### **OPEN BINDING**

Traditional screw-mounted bindings are compatible with any "flat" alpine ski on the market.
